

Devon Li

Tel: 0450892324 E-mail: devon.li.devops@gmail.com

Mount Waverley, Melbourne, VIC

Github: github.com/Soymilk1006 LinkedIn: www.linkedin.com/in/devon-li-49607828b

Highlights

- 4.5 years of cloud-related experience, plus 6 years of experience as a Network Engineer
- Extensive expertise in CI/CD pipeline design, infrastructure as code management, and monitoring solutions implementation
- Full-stack development experience with a deep understanding of microservices and serverless event-driven architectures
- Possess good knowledge in front-end development using React.js, and back-end development with Flask, Next.js/Nest.js, and the .NET Core framework
- Strong communication and teamwork skills, with experience using Jira, Slack, Confluence

Skills

- CI/CD: Jenkins, Github Action, Azure Devops, AWS Codepipeline
- Containerisation/Iac tools: Docker, Kubernetes, Terraform, Ansible, CloudFormation & CDK
- Hands-on expertise with multiple Cloud Platforms: AWS, Azure and GCP
- Monitoring/logging: Prometheus, Grafana, ELK and Splunk
- Security Tools: SonarQube, Aquasec, Snyk, Veracode, Zap
- Programming/scripting languages: Shell/Powershell, Python, Javascript/Typescript, Java, PHP
- OS: Ubuntu (20.04), Amazon Linux, Centos 7/8
- Database: MongoDB, Mysql, Redis, PostgreSQL
- Web Development: ReactJS, Redux, Express, Nextjs/Nestjs, Webpack, GraphQL, KeystoneJS, Framer Motion, Bootstrap, flex design
- Routing and Switching Protocols: BGP, EIGRP, OSPF, VRRP, LDP, RSVP, STP, RSTP, MSTP, etc.

Working Experience

Cloud Engineer (Devops)	MTData, Melbourne	August 2024 - Present
--------------------------------	-------------------	-----------------------

- Managed, optimized, and upgraded the CI/CD pipeline processes and underlying cloud infrastructure with a focus on ensuring high availability, reliability, and fault tolerance to support the entire software development lifecycle.
- Collaborated with development teams on system design, implemented various cloud services, and successfully reduced pipeline-related issue resolution time from days to typically under two hours.
- Designed, implemented, and supported complex cloud infrastructure by applying security best practices in network design, code assurance, vulnerability scanning, and monitoring to minimize risks.
- Led the transition of multiple projects to serverless event-driven architectures, resulting in significant reductions in maintenance costs and improved system scalability

- | | | |
|------------------------|---------------------|-----------------------|
| DevOps Engineer | Data2App, Melbourne | June 2023 - July 2024 |
|------------------------|---------------------|-----------------------|
- Designed, planned, and implemented the complete cloud infrastructure, including CI/CD pipelines, to effectively support the development of React.js frontend and Node.js backend applications
 - Automated infrastructure provisioning and management across multiple cloud platforms using Terraform and Ansible.
 - Implemented continuous integration in a multi-node Jenkins environment for building, testing, and delivering artifacts. Utilized tools such as SonarQube, Snyk and Zap for comprehensive security and quality assurance
 - Ensured high availability for backend application deployments using EKS and AKS, including setting up a failover mechanism between multiple cloud platforms
 - Applied lambda functions to periodically backup sensitive data and implemented security best practices through network design, AWS SCP, WAF, GuardDuty, and Security Hub
 - Established monitoring and logging solutions following the 4 Golden Signals strategy, ensuring real-time system monitoring and timely notification by integrating technologies such as CloudWatch, Prometheus and Grafana
 - Collaborated with Engineering teams in an Agile environment to facilitate successful delivery of the work items.

- | | | |
|-----------------------------|--|----------------------|
| Full Stack Developer | XING IT Solutions, Melbourne Freelance | Jan 2022 - June 2023 |
|-----------------------------|--|----------------------|
- Developed a serverless and event-driven Pizza ordering application utilizing Amazon EventBridge, AWS Step Functions, AWS Lambda, Amazon SQS, and API Gateway to establish an efficient, low-code backend architecture, and integrated a responsive frontend with React.js and AWS IoT Core to ensure spontaneous, real-time updates
 - Developed an online clothing application utilizing TypeScript, React, Next.js, Tailwind CSS, Keystone.js, and GraphQL, with the front end hosted on the Vercel platform and AWS EKS utilized for backend containerization, demonstrating proficiency in modern web development frameworks and cloud technology
 - Created a dynamic Gym website using React, Tailwind CSS, and Framer Motion, with the front end hosted on a AWS S3 bucket, and integrated API Gateway, AWS Lambda, DynamoDB, and SES to handle contact form submissions, ensuring smooth animations, responsive design, and efficient user engagement

- | | | |
|-------------------------------------|----------------------|-------------------------|
| Senior Core Network Engineer | China Telecom Global | May 2011 – January 2017 |
|-------------------------------------|----------------------|-------------------------|
- Designed, implemented, and maintained a redundant and fault-tolerant backbone network on over 300 routers & switches, minimizing downtime and ensuring 99.99% network availability by utilizing a range of routing and switching protocols such as: BGP, OSPF, EIGRP, IP/MPLS, and STP
 - Developed and maintained Perl scripts for daily network automation, including configuration backups, and change management, leading to a 20% reduction in incident response times
 - Implemented proactive network monitoring solutions using MRTG to detect and resolve issues in

advance, reducing yearly network outages by approximately 5%

- Utilized Wireshark for in-depth network analysis to identify and troubleshoot issues, significantly enhancing the network's reliability and performance
- Provided 24x7 hrs technical support to corporate customers, achieving rapid 15-minute response times.
- Regularly completed a variety of programming projects aimed at enhancing business workflow processes at the network layer using PHP, JavaScript, Perl, and MySQL

Licenses & Certificates

- AWS Certified Devops Engineer - Year 2024
- Certified Kubernetes Administrator - Year 2024
- AWS Solution Architect - Associate - Year 2023
- Cisco Certified Network Professional (CCNP) - Year 2012

Education Background

- Master in Information Technology from University of New South Wales
- Bachelor in Electronic and Information Engineering from Fuzhou University, China
